

VITROKOTE®

See life in
COLOUR

Select colors may require **Opti-Clear®** low iron glass to achieve desired coat. Variations may occur during commercial manufacture depending on the glass size and thickness. Available finishes are opaque, pearlescent, glitzy and metallic. Ideal for annealed, flat and bent tempered, laminated, patterned and other glass types of functional forms. Color matching is also available. Appearance of the product will be affected by its installation location, the lighting system, lighting position, external light, and reflections around it. It is recommended that **VitroKote®** back painted glass designed as connecting panels be ordered in single batch to minimize color variation and achieve maximum uniformity of color shading. A combination of **Gunther Ultrabond Mirror Mastics®** and genuine **Sekisui Double Adhesive Tape** provides long term adhesion and support for **VitroKote®** installation.
