

- ✓ non-staining
- ✓ non-ghosting
- ✓ safe & durable

VitroKote Glassboards

While technological developments may be one of the biggest breakthroughs in education and business, the static whiteboard remains to be a key element in academic and corporate settings. Presentation with the use of whiteboards facilitates learning and promotes greater collaboration by making the thinking process more visual. In addition to increasing audience engagement, it helps people process and retain information better.

Ushering in a new age for glass products and manufacturing techniques, San Francisco Mirror reinvented this vital educational tool in order to produce a different, higher quality and wholly functional form of glass.

VitroKote Glassboards is an opportunity for architects, interior designers as well as property owners to add incredible design to interior environments.

VitroKote Glassboards quickly took over in replacing traditional whiteboards due to its smooth, nonporous surface that is easy to clean and low maintenance. Aside from serving as an ideal medium for critical presentations, tempered VitroKote Glassboards provide exceptional safety and durability while taking advantage of the inherent beauty and functionality that only glass can offer.

Advantages

Non-Staining &
Non-Ghosting Surface

Easy to clean

Safe and durable

Compatible with dry-erase and
permanent markers

Custom sizing options

Applications

Corporate offices

Educational institutions

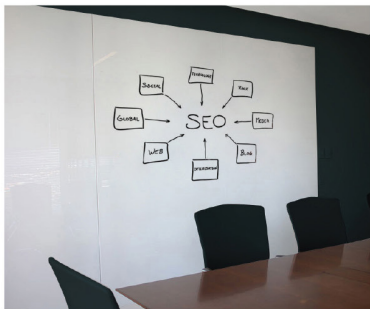

Conference rooms

Hospitals

Collaborative spaces

Entertainment studios

VitroKote Glassboards manufactured using **Opti-Clear** glass offers optimum color realization and maintains clarity over the range of glass thickness. **Opti-Clear** glass allows the color to be truer without the greenish tint found in ordinary clear glass and delivers maximum uniformity for remarkable interior spaces.

Opti-Clear Glass

Ordinary Clear Glass

VitroKote Glassboards are easy-to-install whichever the design of your choice is. For perfect seamless installations, the industry standard is to use **Gunther Ultra/Bond Mirror Mastic®** and **Sekisui Double Adhesive Tape**. Moreover, VitroKote Glassboards can also be fabricated with holes for installation with stainless steel standoffs.
